Lab 04 Handout

COURSE INSTRUCTOR

Dr. Ibrahim Ghaznavi

Main Objective

In this lab, you will design and develop a small product website consisting of 3 webpages. The purpose of this task is to practice HTML, CSS, and linking multiple pages together to make a simple website.

Your website must include:

- A navigation bar (header) on every page.
- A shared CSS file for styling.
- Different sections on each page with text, images, and links.
- Proper file naming and use of images.

Website Structure

Your website will have 3 webpages (HTML files):

Page 1: Home Page

File name: BSCS23099_Home.html

This is the first page of your website. It should have 4 sections:

1. Section 0 – Header / Navbar

- A navigation bar on the top.
- Add 3 buttons/links: HOME, PRODUCTS, ABOUT US.

2. Section 1 – About Us

- A full-width horizontal image (covering the screen).
- Display the name of your website on the image. (Choose a creative name).

3. Section 2 – Check Our Products

- A large image with text on it (e.g., 'Explore Our Products').
- Add a button on the image which takes the user to Page 2 (Products Page).

4. Section 3 – Footer

- Add contact details such as:
 - Cell number
 - Email
 - Location

Page 2: Products Page

File name: BSCS23099_Products.html

This page should display 5 different products, each in a separate colored box that spans the page horizontally.

Each product must include:

- Product Image
- Product Name
- Product Price
- Product Availability (e.g., In Stock / Out of Stock)
- Description/Features (at least 2–3 lines)

Design tip: Use a light background color for the product boxes to make them look neat.

Also, add the same header/navbar at the top (just like the Home page).

Page 3: Contact Page

File name: BSCS23099_Contact.html

This page contains your contact details in a styled box.

Add:

- Cell number
- Email
- Location

Also, add social media buttons with logos:

- Facebook logo → linked to <https://facebook.com>
- Instagram logo → linked to <https://instagram.com>
- LinkedIn logo → linked to your own professional LinkedIn profile (Create your LinkedIn profile with your professional image and details, and link your profile here).

Again, include the header/navbar at the top (same as other pages).

Styling Rules (CSS)

- All styling must be done in one CSS file only.
- CSS file name: BSCS23099_style.css
- This file must be linked to all 3 HTML pages.

Styling guidelines:

- Use images for background and products.
- Use clean and consistent fonts.
- Avoid very bright or clashing colors.
- Apply styling to:
 - Navbar (hover effects recommended)
 - Footer
 - Buttons (make them attractive)
 - Product boxes
 - Social media logos

Images

You must include the images you used in your submission.

Rename them as:

- BSCS23099_image0.png
- BSCS23099_image1.png
- BSCS23099_image2.png ... etc.

NOTE:

You should put effort into making your website visually appealing. Make sure to use images. Avoid using strange colors. There should be the use of different styling techniques using CSS and HTML tags. You are allowed to get help from the internet to look for different things that help you to make your website more creative and attractive. This task covers a **major part of your grade for this lab**. **Do not copy or replicate other's work and make your own designs.**

You can get help regarding CSS from this website: [CSS Tutorial](#)

You can get help regarding HTML from this website: [HTML Tutorial](#)

Feel free to search anything on Google on your own to discover more about this.

Submission Rules

1. Submit all 3 HTML files, 1 CSS file, and the images you used.
2. Do NOT submit as a ZIP file. Submit files separately.
3. Make sure all file names follow the exact format given above.
4. If you do not follow the rules, your marks will be deducted.

Tips for Creativity

- Choose a professional color scheme (e.g., light backgrounds, dark text).
- Use spacing (margins and padding) to make your website look neat.
- Use bold headings and readable fonts.
- You may add hover effects on buttons and navbar for extra marks.

End Goal

By completing this task, you will have created a 3-page website with a working navigation system, product display, and contact page all styled using a single CSS file.
